# **Storelt Protocol v0.4**

# 1. Introduction

Hello, this is the documentation for the Storelt protocol. It is used to com- municate with our server. We will be implementing this protocol on top of WEBSOCKETS to enjoy its messaging model. Everything should be JSON objects.

## 2. The JSON data structures

#### 2.1 Command

```
"uid": unique_command_id,
"command": command_name,
"parameters": {
    "parameter1Name": parameter1,
    "parameter2Name": parameter2,
}
}
```

### 2.2 Response

}

TODO: document possible errors.

#### 2.3 Commands

#### **JOIN**

From a client to the server. This is the first request to make whenever a client wants to get online.

```
{
    "uid": 263,
    "command": "JOIN",
    "parameters": {
        "authType": "fb",
        "accessToken": "34j8b4jhb343hbKJH54",
    }
}
```

The response will contain a FILE object named "home".

#### **FDEL**

From a client or the server. Delete a file/directory.

#### **FADD**

From a client or a server. Add a file to the user three.

#### **FUPT**

From a client or a server. Update a file.

## 2.4 FILE object

This object describe a file or a directory.

```
{
   "path": "/foo/bar",
   "metadata": metadata,
   "IPFSHash": "IPFS hash of all the data in the file",
   "isDir": true,
```

```
"files": {
    "foo.txt": FILEObject,
    "someDirectory": FILEObject,
}
```
